

Daniel Gekonde

West Bloomfield, MI | danielgekonde@gmail.com | danielgekonde.com | linkedin.com/in/daniel-gekonde | (248) 836-8123

Computer Science student at Michigan State University with hands-on experience in data structures, algorithms, and systems programming. Seeking full-time software engineering roles.

EDUCATION

Michigan State University - College of Engineering, E. Lansing, MI

Aug 2022 - Dec 2026

Bachelor of Science, Computer Science, Dean's List

Courses: Data Structures & Algorithms, Computer Organization, Software Design, Computer Security

SKILLS

Programming Languages: Python, Java, C#, C++, SQL, HTML/CSS

Developer Skills/Tools: Git, FastAPI, REST, Google Cloud Platform, VS Code, Visual Studio, PyCharm, CLion

Soft Skills: Problem-Solving, Project Management, Team Leadership, Agile Development

PROJECTS

Michigan State University

CSE 335 – Machine Simulator | C++, Box2D

- Designed and implemented a physics-driven machine simulation framework using UML design
- Applied C++ object-oriented design principles to integrate Box2D physics engine within various dynamic components (motors, pulleys, conveyors)

CSE 331 – Hybrid Sorting | Python, PyCharm

- Implemented a modular hybrid sorting algorithm by dynamically switching between merge and insertion sort based on sublist size to optimize performance in searching large-scale datasets

CSE 331 – Dynamic Deque & Sliding Window Analysis | Python, PyCharm

- Implemented a Circular Deque data structure in Python with $O(1)$ insertion/removal and dynamic resizing
- Emphasized robustness and scalability, ensuring correctness under varying input sizes and edge cases

EXPERIENCE

United Wholesale Mortgage (UWM), Pontiac, MI

May 2026 – Aug 2026

Software Development Intern

MIA – Most Intelligent Agent | Python, FastAPI, Orkes Conductor, Twilio

- Contributed to a real-time voice AI agent (telephony, speech-to-text, LLM orchestration, text-to-speech) that triages inbound support calls and files structured tickets on the caller's behalf
- Built a FastAPI ticket-submission microservice with 4 REST endpoints capturing 14+ fields per ticket, wiring it into the agent's LLM tool layer so callers receive a generated ticket ID and confirmation number in real time
- Engineered conversational workflows and LLM prompt logic which reduced average ticket creation time by 60%, eliminating the need for employees to manually navigate the support portal.
- Ran and validated outbound voice-call workflows end-to-end in Orkes Conductor (WebRTC/SIP via Daily.co and Twilio), verifying a child-process isolation pattern that keeps the async event loop unblocked across concurrent calls

INVOLVEMENTS

National Society of Black Engineers | Undergraduate Mentor

Aug 2022 – Present

- Organized professional development workshops and networking events attended by 50+ peers, enhancing technical and career readiness

Cybersecurity Club | General Member

Aug 2023 – Present

- Performed in technical workshops, analyzed blockchain fundamentals, cryptographic protocols, and decentralized systems security
